

# TOP 10 BENEFITS

1

Spend more time planning by spending less time managing data, finding options, and interpreting “insights”.

2

Generate relevant AI driven “what-if” scenarios with one click and compare options against one another.

3

Drive productive discussions during decision making time with contextual based recommendations and insights.

4

Become less reactive. Anticipate challenges sooner and prevent resource bottlenecks or overspending by identifying possible snags.

5

Be more proactive. Learn the ebb and flow of your organization’s resource supply, recommendations, and options.

6

Work in a “living” portfolio and accommodate changes to your plan on-demand thanks to a flexible, structured framework.

7

See how it’s all connected. Get a combined view of performance metrics across the enterprises’ portfolios.

8

For more on target forecasting, leverage your own organization’s past outcomes to influence recommended options.

9

There is no portfolio too big or too small for our algorithms. Start planning with what data you have.

10

Set priorities on projects the way YOU want. Decision Lens Accelerate has ranking options that range from rigorous collaboration to quick 5-star rating systems.
